

Fighting the Spread of Coronavirus in Your Skilled Nursing Facility

Skilled nursing facilities across the country are instituting social distancing measures, restricting visitors and enacting careful infection prevention protocols to keep COVID-19 at bay.

Key data points to heighten infection surveillance

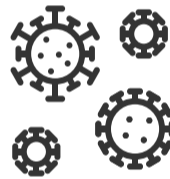

Recent respiratory infections with unknown causes

Recent respiratory symptoms that met and didn't meet McGreer criteria

QAPI initiatives to prevent outbreaks

Recent transmission-based precautions and their effect on the spread of infection

Reported infections in staff and visitors

The Centers for Medicare & Medicaid Services (CMS) also has **increased its inspections of SNF infection controls**, which means following all CMS infection control regulations must be a priority.

Take the next step!

ABILITY INFECTIONWATCH can help you manage your infectious disease protocols and monitor resident symptoms.
